

Hani Mohammed

A passionate full-stack web developer that specializes in building and optimizing user-focused websites and applications.

Experience

I'm a full-stack web developer and I have built web applications of all types. I have a strong knowledge of frontend & backend development and I have built multiple projects using a variety of techs. I have the motivation to help you turn your ideas into working and successful web applications.

Projects

Book Me

I built an application where you can book accommodations while traveling, and you can also list your accommodations so people can book it too.

React | Vite | Firebase | Uuid | Reducers

The Blog

A blog application where you and other authors can write blogs and edit them, each blog can only be edited by its author.

Mongo DB | Node Js | Express Js | JWT & Cookies | AWS | Render Cloud

Volar

An e-commerce website to buy luxury watches from famous brands with a stripe payment gateway and pages for product page, cart, and categories all linked together.

Next Js | Swiper Js | Mongo DB | Tailwind CSS | Stripe | Aos
